TIDEMARK

Architecture and execution provenance

SELECTION, NOT SUPPLY

CURRENT_OFFLINE

Current deterministic product evidence - no provider or cloud request

Untrusted proposal
Invoice and model-authored tool arguments

↓

Trusted TIDEMARK runtime
Protected-role check -> trusted reference resolution -> immutable decision -> prepared authority -> execution-time revalidation

↓

Evidence before effect
Local single-use consumption, synthetic adapter, authoritative payment record, masked projection

↓

Read-only judge UI
Proposal, decision, execution, replay and effect remain separate

HISTORICAL_LIVE_GEMINI_ADK

Accepted Order 12 live path - historical, not regenerated

Gemini 3.6 Flash
Exact model: gemini-3.6-flash

↓

Gemini Developer API
Non-streaming generateContent

↓

Google ADK 1.18.0
Real callback RELEASE / VETO path

↓

Trusted TIDEMARK runtime
Prepared-call and execution boundary

↓

Synthetic payment effect
Benign: 1 payment; raw supply: 0

HISTORICAL_CLOUD_PROVIDER_FREE

Accepted Order 21 Cloud Run proof - GEMINI_CALLS=0

Historical operator
Bounded manual invocation

↓

Private Cloud Run Job
europe-west1; task=1; retries=0

↓

Provider-free proof
Six scenarios; application network calls=0

↓

Verified outcome
Local/cloud semantics and replay counts matched

↓

Shutdown
Job, image, repository and temporary IAM removed

NO GEMINI / API / ADK -> CLOUD RUN EDGE | ALLOW != EXECUTED | LOCAL AT-MOST-ONCE != EXTERNAL EXACTLY-ONCE

The Cloud Run proof is historical and provider-free. The job was removed after proof. No current deployment or production-readiness claim.

Derived without semantic change from docs/architecture/TIDEMARK_VARIANT_C_W6_DEPLOYMENT_ARCHITECTURE_v1.0.md
